Arshia Soori

Senior Python and AI Engineer

Phone: +98 913 563 5155 **Email:** arshiasoori2000@gmail.com

LinkedIn: /in/arshia-soori **GitHub:** /CaptainArshia

Website: arshiasoori.com

Senior Python and AI engineer building production AI systems end to end: LLM agents and RAG pipelines, ML models that turn raw wearable and radio sensor data into meaningful insights, and the Python backends that serve them. Track record of taking AI products from research to production as CTO of two knowledge-based products. Looking to take on new challenges building AI-powered products.

Skills

I already know

Python 5/5 · LangChain 4/5 · LlamaIndex 3/5 · Pydantic AI 4/5 · Hugging Face 3/5

PyTorch 3/5 · TensorFlow 3/5 · Pydantic 3/5 · FastAPI 4/5 · Django Ninja 5/5

Django 5/5 · Django REST Framework 5/5 · Celery 4/5 · Redis 4/5 · PostgreSQL 4/5

RabbitMQ 3/5 · MQTT 4/5 · Docker 4/5 · Kubernetes 2/5 · Linux 4/5 · Git 5/5

I speak

Persian native · English fluent

Work experience

CTO

March 2026 - now

DelBand

Iran's first smart health monitoring service, and the first to hold a Med 3.0 license. Owned and operated by Ayandeh Pardaz, backed by MCI's investment fund Harekat Aval, with Hamrahe Aval (MCI) as investor and business partner.

- Leading a team dedicated to medical algorithms, turning raw wearable sensor data (ECG, HRV, sleep, blood oxygen, falls) into meaningful health insights using ML and AI.
- Building AI agents that answer users' questions about their health data and give exercise, food, and sleep recommendations.
- Owning the AI and data architecture, from sensor signal processing to LLM-powered features in the app.

I hereby give consent for my personal data included in my application to be processed for the purposes of the recruitment process.

- Leading, hiring, and mentoring the engineering team and owning the company's technical strategy.

Technologies: Python, LangChain, LlamaIndex, Pydantic AI, Hugging Face, GPU (CUDA)

CTO and AI Tech Lead

September 2022 - February 2026

IndoorA

The first indoor positioning and navigation system in the Middle East, owned and operated by Ayandeh Pardaz.

- Led development of the positioning engine fusing BLE, Wi-Fi, and UWB signals with KNN, neural networks, CNNs, LSTMs, Kalman filters, and particle filters.
- Took the product from early stage to a certified knowledge-based positioning and navigation platform.
- Owned technical strategy, architecture, and hiring for the engineering organization.
- Delivered for MCI, Radin, Tehran International Exhibition Center, Iran Mall, and Mobarakeh Steel Company.

Technologies: Python, PyTorch, TensorFlow, Hugging Face, GPU (CUDA), Bluetooth / BLE, Wi-Fi

Tech Lead

September 2021 - August 2022

Advanced Aerospace Structures Laboratory, K. N. Toosi University of Technology

Led the development of an intelligent traffic and movement management system combining image processing, CNNs, and language models for entry/exit management, automated door control, guest management, and reporting.

- Led development of real-time CNN-based (YOLO) detection and identification of vehicles and people.
- Used language models to interpret activity and generate human-readable summaries and reports.
- Led a team of 7 engineers, setting technical direction and reviewing implementation.

Technologies: Python, OpenCV, YOLO, PyTorch, TensorFlow, GPU (CUDA)

Projects

DelBand

March 2026 - now

Iran's first smart health monitoring service, and the first to hold a Med 3.0 license. Owned and operated by Ayandeh Pardaz, developed in collaboration with and supported by MCI, backed by MCI's investment fund Harekat Aval.

I hereby give consent for my personal data included in my application to be processed for the purposes of the recruitment process.

Wearable devices (rings, watches) capture sensor signals which are processed and turned into meaningful health insights shown in the app. AI agents answer users' questions about their data, help them understand it, and give recommendations on exercise, food, and sleep plans. For elderly users, the platform tracks ECG, HRV, sleep, falls, blood sugar, and blood oxygen, and can send notifications and emergency calls to observant family members or caregivers.

My role: CTO

Company: Ayandeh Pardaz

Backed by: Hamrahe Aval (MCI), Harekat Aval

Category: Health tech, AI agents

Recognition: Certified knowledge-based product, Selected Health & Care project, Presidential Innovation and Prosperity Fund, 6th International mHealth Congress of Shiraz University of Medical Sciences

Technologies: Python, Rust, Django, Django Ninja, Pydantic AI, LangChain, LlamaIndex, Hugging Face, PostgreSQL, TimescaleDB, GPU (CUDA)

IndoorA

September 2022 - February 2026

The first indoor positioning and navigation system in the Middle East, owned and operated by Ayandeh Pardaz. A single knowledge-based positioning and navigation engine (BLE, Wi-Fi, UWB, beacons, and gateways with KNN, neural networks, CNNs, LSTMs, Kalman filters, and particle filters) powering three business models:

- Indoor positioning for organizations managing physical and human assets: employee productivity, asset inventory, access control, and guest movement management. (Radin, MCI)
- Life safety: continuous monitoring of access levels, movement through hazardous areas, and incidents, sending alerts to rescue teams and managers. (Mobarakeh Steel Company)
- Positioning, wayfinding, visitor management, and personalized offers in malls and exhibitions, connecting business owners with their customers. (Tehran International Exhibition Center, Iran Mall)

My role: CTO and AI Tech Lead

Company: Ayandeh Pardaz

Category: Indoor positioning, Navigation

Recognition: Member of Iran's Knowledge-Based Companies

Technologies: Python, Rust, Django, Django Ninja, PostgreSQL, TimescaleDB, Bluetooth / BLE, Wi-Fi, TensorFlow, PyTorch, Hugging Face, MQTT, GPU (CUDA)

Intelligent Traffic and Movement Management System

September 2021 - August 2022

I hereby give consent for my personal data included in my application to be processed for the purposes of the recruitment process.

An intelligent traffic and movement management platform combining computer vision and language models to automate entry/exit control. CNN-based image processing detects and identifies vehicles and people in real time, driving automated door open/close control and streamlined guest management. Language models interpret activity and generate human-readable summaries, surfaced through a dashboard with detailed reports for facility operators.

My role: Tech Lead

Company: Advanced Aerospace Structures Laboratory, K. N. Toosi University of Technology

Category: Computer vision, AI

Technologies: Python, OpenCV, YOLO, PyTorch, TensorFlow, Jupyter, Kaggle, GPU (CUDA)

Education

Aerospace Engineering

September 2020 - July 2024

K. N. Toosi University of Technology

Bachelor's degree in Aerospace Engineering.

I hereby give consent for my personal data included in my application to be processed for the purposes of the recruitment process.
